

LEGAL AND ADDITIONAL INFORMATION

SMARTIFY YOUR BUSINESS. PRINTING INNOVATION.

In modern society, keeping up with technology is critical to the success of any business or the productivity of any individual. The choice of technology can be the difference between survival and leadership.

As the workplace becomes more digitized and the workforce becomes more mobile, printer and copier devices must also adapt and evolve.

Printer technology and satisfaction lag the electronics innovation most employees expect. Nor has there been any major entrant to help shake change.

Until now.

Samsung is applying its ingenuity to develop breakthrough printing solutions that ignite productivity. Only Samsung has the electronics expertise to design and build a printer that fits the way society works today.

Printing for the modern world has arrived.

Samsung is printing innovation.

SAMSUNG FLEET ADMIN Pro

Smartify fleet control with **powerful multi-site management**

SEAMLESS MANAGEMENT, **MULTI-SITE** CONTROL

BACKGROUND

Managing the increasing number of devices across multiple sites is becoming more difficult for IT administrators of large enterprises, small and mid-sized businesses as well as resellers managing various clients. To cope with a fleet of dispersed devices, IT staffs require automated management, monitoring and reporting capabilities that enable real-time administration of devices in multi-site, multi-server environments. Such automated governance would eliminate menial tasks to ensure a high standard of productivity—which is of particular concern for large enterprises—while curtailing costs.

SOLUTION BENEFIT

Samsung Fleet Admin Pro is a core printer fleet management solution with essential features combining convenient monitoring and efficient automation, such as device configuration monitoring and automated rollback. This essential suite of features comes free of charge with the basic version. Using Fleet Admin Pro's indispensable features, businesses can flexibly and seamlessly manage devices with greater efficiency and ease, resulting in improved productivity while at the same time reducing costs. And, by installing an additional plug-in for the extended version, large enterprises can gain more powerful and cost-efficient fleet management with support for multi-site and multi-server environments. As a component of Samsung Business Pro™ Printing Solutions, Fleet Admin Pro has been developed to work optimally with Samsung devices and third-party vendor devices.

FLEET ADMIN PRO

Powerful primary fleet management for greater oversight

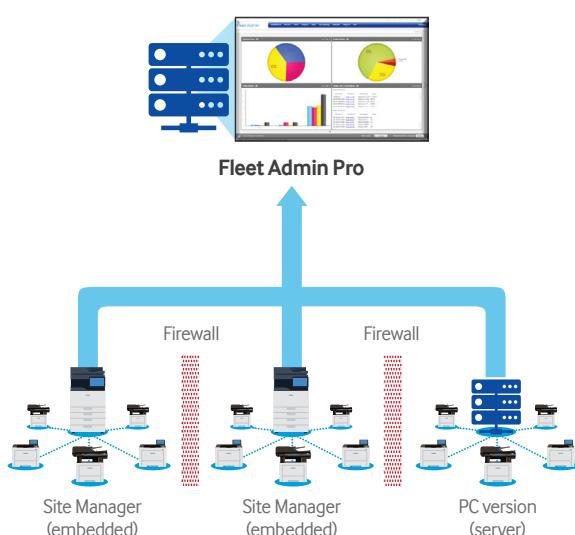

Fleet Admin Pro includes an array of essential features to help enterprises boost work productivity and gain significant cost savings. Powerful primary features including Device Configuration, Device Monitoring and Device Discovery enable improved device oversight and management of the entire fleet from a remote location. In addition, the Usage Control feature maintains tight command of device use by administrators to lower expenses.

Main Feature		Description
Device Configuration	- Device configuration	Simultaneous configuration of settings for multiple devices
	- Firmware Installation	Simultaneous firmware update for multiple devices
Device Monitoring	- Widget Dashboard	User friendly device monitoring with graphic widget dashboard
	- Task Automation	Automated task handling
Device Discovery	- Profile monitoring (NEW)	Monitoring of device configuration changes and automatic restore to original administrator settings upon change detection
	- Broadcast, IP Range, SLP Multicast, LDAP, CSV import, SNMP v1/v2, SNMP V3, Local device discovery (USB connected device)	Faster device discovery than previous conventional methods
Usage Control	- Job accounting	Free, user-based usage control and reporting

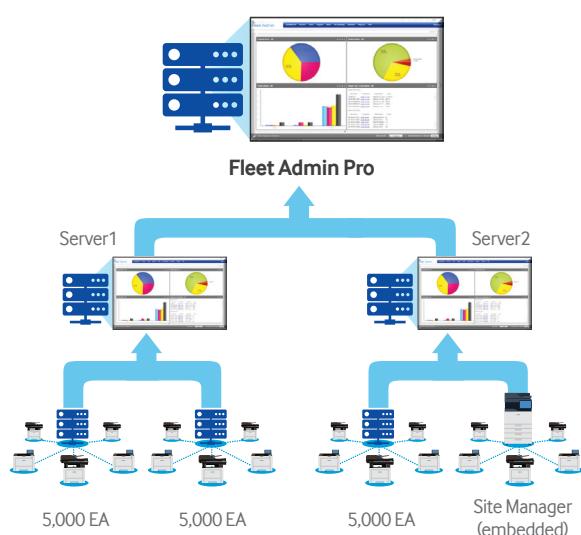

Extended features for robust multi-site & server management

Fleet Admin Pro helps IT administrators efficiently and centrally manage multi-site printers using Site Manager or multi-servers, which are both paid services. These extended capabilities drive greater productivity and cost savings through multi-site management support. The Site Manager application can be embedded inside a printer or PC for server-less, multi-site printer management of up to 5,000 devices. Multi-server provides scalable load balancing using up to three servers to manage up to 30,000 devices. Features such as Automatic Notification ensures responsive support to any issues in the fleet and Enhanced Monitoring enables remote monitoring of more device indicators than previously possible, minimizing maintenance from field technicians.
